

At Lynnfield school we would like to improve children's achievement by using ICT in new and creative ways. We would like to encourage variety in the way the curriculum is delivered to inspire wonder and awe. We want to develop their skills in the use of ICT to enable them to compute, to communicate, to collect data and to connect with the wider world. We want them to use ICT with purpose and enjoyment.

Through the use of ICT we want to maximise the efficiency of the educational service that we provide and to help parents connect with the learning occurring in school.

At Lynnfield we work hard to safeguard our children's interests and protect them by ensuring that we are always mindful of the effects of developing ICT within our school.

At Lynnfield we do this by:-

keeping up-to-date with new technologies

updating hardware and software when needed.

planning lessons that excite and motivate children, using new technologies such as ipads.

using ICT for administrative purposes eg to create planning, resources, keeping records of children's progress etc...

providing a website to keep parents, the local community and other interested parties informed.

using Education City and Purple Mash websites for homework and other websites within lessons.

teaching e-safety throughout the year as well as Internet Safety day.

monitoring internet use and filtering internet content

supporting individual children with special educational needs.
